

Roller Coaster Boat Trailers

- 1 Only Indespension manufacture rollers with nylon bushes on an aluminium shaft to ensure free running and perfect cushioning for the hull
- 2 The now familiar swinging beams speed recovery from the water by gathering the bows of the craft and make launching little more than a push into the shallows
- 3 Smooth, even towing is assured with the SuperRide independent suspension system
- 4 The SuperHub system helps protect bearings from the ravages of seawater and prolongs their life. Bearing savers are also fitted as standard
- 5 Integral mudguard steps enable safe mounting and dismounting
- 6 TripleLock coupling ensures the trailer is locked automatically on or off the towing vehicle
- 7 New Indespension coupling with nylon bush prevents binding due to the corrosive effects of saltwater
