

# Flatbed Trailers

- 1 Low profile wheels allow a lower deck height for easier loading and unloading
- 2 Strong yet light, the uniquely designed panels look good and are easy to remove and re-fit. The rolled profiles eliminate sharp edges and ensure maximum strength
- 3 Fixing the panels outside the deck means that the full width is available for loading
- 4 Corner posts are situated on the outside of the bed avoiding cut-outs in the floor panels
- 5 Unique angled prop stands are easy to use
- 6 Heavy duty ramps stow away under the body
- 7 8' loading ramps for reduced loading angle.
- SuperRide suspension and TripleLock coupling
